

PROPOSED SOLUTION

In this proposed System, User are provided with three options for data entry namely Income, Expense and Wish List. If you select income or expense you would be provide with its types and subtypes.

For wish list only items can be inserted. This information would be saved onto database by their particular classification. The saved data can later be changed if the user needs to do as such.

Altering here means adding description changing wish list updating data etc. User can also view the result. They can also filter to see the required content only. They have an option to set a limit for the amount to be used for that particular month if the limit is exceeded the user will be notified with an email alert.
